

1965 4 speed reverse light switch and wiring

Posted by 2+2=421 - 2017/09/11 16:04

Can anyone provide me with some pictures of factory set up for 4 speed reverse light switch with bracket and rod as well as wiring and plugs? I converted my automatic to stick with all factory correct parts but this bit is driving me crazy. Any photos of wiring and plugs would be extremely helpful. As you guys may know the neutral safety switch wiring on an automatic was part of the six wire connector on the automatic console. I cant find anything to show me how a stick car was wired with a console.

Thanks. Tony
