

Engine Size

Posted by sgp358 - 2010/06/06 21:00

My 65 2+2 has a 455 in it and there is no provision to list it that way. I have the engine listed as "unknown". Is there a way to list an engine other than an original? It was a 338 hp car.

We are trying to record how the vehicles came from the factory for historical purposes, so please list it as 421/338.

You can then list the replacement 455 under Car Details / Additional info.

Hope that makes sense.

I have a different motor than original and I just listed it as if it had the original. I have a PHS breakout on the car and its not practical to list every possible engine combo that one could install. Especially if Jay Leno owned it. It might have a Turbine,steam or helicopter engine in it.

What was the biggest HP 2+2 of all time? Canadian included. 376HP. 67?

I believe it was possible to order a Chevrolet 427 in the Canadian cars, which may have boosted the HP over the 428 H.O. version of 376. But I could be wrong. I'd venture to guess our Canadian bretheren would be officianados on the topic. Bunch of hosers eh?!

I almost bought a canadian 427 but does it have more muscle?I flew out to drive it from Casper W.O. to SE Florida,ut a lying snake who owned it decided when I got there that he wanted to sell it to someone else. after agreeing 5 times on the phone. He said I he thought it had a 396 but it was an original 427 2+2 CV for sure.
