

## Trunk lid numbers

Posted by crazyliver - 2011/10/04 10:51

---

All

There is a set of numbers moulded into the trunklid by the locking mechanism. I have been taking pics of mine and others I have seen, and posting them. There was talk on another forum about them being build numbers, but I do not believe that is the case. If any 86 2+2 members stumble on this post, I would appreciate a pic of the trunklid similar to the ones below.

Being the 4 examples I have are so close together, I am suspecting they are some sort of build date code. The more examples the better to figure out this mystery.

If any members cannot take a pic, then a verbal confirmation of the number would be appreciated. As you can see we have 107, 108, 111, and 116 off of 4 different cars.

On mine, the number is 113. What do the letters before it ( RENE ) stand for?

I do not know what RENE stands for. Being every number I have seen so far has been extremely close, the numbers are either mold numbers or some sort of date code.

I know these cars were put together at an outside firm and not at Pontiac itself. Could RENE be the initials of the company that put these cars together? I believe it was a Canadian company that did the work.
