

Rear springs

Posted by 8lug - 2012/01/04 22:00

Does anyone have any experience with Coil spring specialties? I found them in Hemmings and was dealing with them on new rear springs . Also any tips on install would be appreciated. thanks, Mike

No, but I have a brand new set of springs that you can have for \$120 shipped. I decided I don't need to replace mine so I never used them.

If they are anything like the 64 rears they are a "pig" to get the top nut & bolt un-done!! I used a drop 5/8 box end to get on the nut on top of frame pocket!! When re-installing I had to reverse the nut & bolt by wrapping a wire around the bolt & sliding it in over top of frame & into hole then install the nut!! then tighten up & snap off the wire!! These Nuts & bolts "must have " been installed at factory before the body was dropped on???
