

8-lug interchange ?

Posted by OldInjun - 2013/11/30 10:58

I plan on adding 8-lug wheels to my '63 Cat and, as I have a bunch of '65 aluminum hubs, I may as well use them. My research shows that the rears will interchange, but the fronts will not, as the '65 brake shoes are wider.

Can I simply transplant the backing plates and shoes from a '65/'66 onto my '63 to accommodate the hubs, or is there something else that needs replacing (spindles?).
