More power!
Posted by 2+2=10 - 2014/02/17 15:43

How can I get more power from the completely stock 305 in my 86' 2+2 aerocoupe? I do not want to put in a different engine and I do not want to spend an arm and leg. What can be done fast, simple and inexpensive to at least get enough power to squeal the rear tires on launch?Thanks.
